DAY ROADMAP

Who this engagement is built for

Client profile

Ideal for founder-managed MSMEs with approximately 25-150 employees where daily coordination depends on Excel, WhatsApp, individual memory, and informal approvals.

Problem signals

Delayed or disputed reporting

Management numbers arrive late, require manual consolidation, or create confusion during review.

Founder-dependent approvals

Routine decisions wait for the owner, creating delay in purchase, dispatch, service, credit, or delivery actions.

Repeat mistakes and rework

Customer complaints, missed commitments, rework, or unclear ownership keep repeating across teams.

BdOS method

1. Discover

Collect structured assessment responses, operating evidence, stakeholder inputs, and current workflow observations.

2. Diagnose

Convert observations into priority gaps with root cause, risk, impact, and evidence.

3. Approve

Review diagnoses and prescriptions before they become approved client actions.

4. Implement

Start one visible improvement and define the 30/60/90-day execution roadmap.

What the client receives

BdOS Business Improvement Sprint

Engagement range: Rs. 75,000 - Rs. 1.5L

Includes assessment, evidence review, approved diagnosis, prescriptions, one quick-win execution start, and a client-ready report. Ongoing support, dashboards, WhatsApp alerts, or custom app build can be scoped separately.

1. Business health assessment

Structured view of current operating strength and pain areas.

2. Evidence-backed diagnosis

Top operating gaps supported by records, reports, screenshots, and observations.

3. Approved prescriptions

Practical interventions with owner, effort, metric, risk, and dependency.

4. Quick-win execution start

One visible improvement initiated with status, blocker, and next action.

5. 30/60/90-day roadmap

A practical improvement plan for the next management review cycles.

6. Client-ready report

Executive summary, score explanation, action plan, and governance notes.

Expected business outcomes

- Clearer management visibility
- Reduced repeat mistakes
- Faster routine decisions
- Practical roadmap before software investment

Start with a focused BdOS sprint to diagnose, prioritize, and begin improvement before committing to larger automation or software programs.
