

## Vikas BdOS

Business Diagnosis Operating System

BDOS MAX

For Rs. 50 crore+ scaling enterprises

# Governed Transformation for Scaling Enterprises

A deeper BdOS engagement for organizations that need cross-department visibility, approval governance, execution accountability, and technology-readiness before ERP, automation, or custom operating systems.

**Build a governed diagnosis and 90-day improvement roadmap for leadership action.**

**Blueprint: Rs. 2.5L - Rs. 5L; Governance support: Rs. 1.5L - Rs. 4L/month**

REVIEW PACK

# Who this engagement is built for

## Client profile

Ideal for scaling enterprises with multiple departments, managers, locations, customer escalation pressure, reporting disputes, approval overload, compliance needs, ERP plans, or professionalization goals.

## Problem signals

### Cross-functional visibility gaps

Departments work actively, but leadership lacks one reliable view of priorities, blockers, ownership, and movement.

### Approval and control friction

Exceptions, escalations, credit, purchase, dispatch, service, and customer decisions need clearer governance.

### Automation readiness risk

ERP, dashboards, or apps are being considered before operating gaps, data discipline, and ownership are fully aligned.

## BdOS method

### 1. Enterprise diagnosis

Assess critical operating dimensions across departments, workflows, data, governance, and execution rhythm.

### 2. Prescription design

Translate gaps into initiatives with KPI ownership, effort, impact, risk, dependency, and approval logic.

### 3. Governance setup

Create review cadence, approval discipline, escalation path, milestone tracking, and executive visibility.

### 4. Transformation roadmap

Prioritize quick wins, process fixes, capability building, dashboards, WhatsApp alerts, and automation readiness.

# What the client receives

## BdOS Transformation Blueprint + 90-Day Governance

**Blueprint: Rs. 2.5L - Rs. 5L; Governance support: Rs. 1.5L - Rs. 4L/month**

Commercial scope depends on departments, locations, stakeholder interviews, governance cadence, reporting depth, integrations, and implementation support. App build and ERP/API integrations are scoped separately.

### 1. Enterprise health assessment

Cross-department view of operating strength, process gaps, and management risk.

### 2. Diagnosis register

Evidence-backed diagnosis with impact, urgency, effort, priority, and reviewer approval.

### 3. Prescription portfolio

Approved interventions with owners, KPIs, dependencies, risks, and review cadence.

### 4. Initiative roadmap

Quick wins, process fixes, capability actions, dashboard needs, and automation candidates.

### 5. Command-center visibility

Approvals, blockers, execution status, initiative movement, and leadership review view.

### 6. 90-day governance plan

Milestones, owners, score movement, review rhythm, and management reporting logic.

### 7. Automation readiness roadmap

WhatsApp alerts, dashboards, ERP/API readiness, audit logs, and integration priorities.

### 8. Executive report

Leadership-ready findings, action priorities, roadmap, and investment decision support.

## Expected business outcomes

- Leadership visibility across departments
- Governed approvals and escalation rhythm
- Prioritized transformation roadmap
- Reduced risk before ERP or automation spend

**Use BdOS to diagnose before prescribing, approve before implementing, and prove operating movement before scaling technology investment.**
